

Although widely used by community corrections agencies to better manage specific offender populations, electronic monitoring is an often-overlooked tool for prison facilities. Increasingly though, prisons are discovering that EM solutions can be valuable tools to efficiently and effectively manage those offenders who have been granted the opportunity to operate outside of a facility through parole, probation, or work-release programs.

MANAGING ACROSS A RESTRICTION SPECTRUM

The level of restriction on an individual operating outside a facility can vary greatly depending on factors that include: the severity of the crime committed, risk assessments, demonstrated behavior, and court mandates. And, because restrictions can vary from offender to offender *within the very same program*, facilities need solutions that offer the flexibility to manage offenders across the restriction spectrum.

That's why agencies and facilities across the country are turning to us for hardware and software solutions that cover the entire spectrum of offender monitoring—everything from location verification to 24/7 real-time GPS tracking:

- **ON-DEMAND LOCATION VERIFICATION**

For those with the least amount of restriction on their activities outside the facility, we offer our **ENROLLINK™** platform for straightforward location verifications. This FREE smartphone application is specifically designed to allow supervising agents to conduct scheduled or on-demand engagements with enrollees.

- **CURFEW COMPLIANCE**

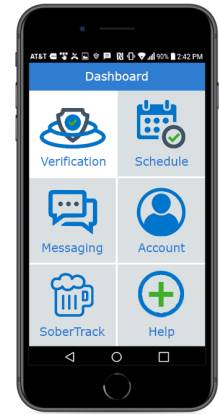

When used in tandem, **BLUband®**, our one-piece ankle-worn radio frequency (RF) transceiver and **BLUhome®**, our home-based RF receiver, accurately and reliably confirm an enrollee's arrival and departure from their domicile.

- **HOME CONFINEMENT MANDATES**

For home confinement mandates that call for more stringent restrictions on an enrollee's activities, **BLUhome** also seamlessly integrates with **BLUtag®**, our one-piece ankle-worn GPS device to provide a real-time notification in the event an offender leaves their domicile.

- **24/7 REAL-TIME TRACKING**

BLUtag continues to set the industry benchmark for extremely accurate 24/7 GPS tracking from a single, compact, ankle-worn device. With its state-of-the-art GPS receiver, **BLUtag** offers faster location acquisition, more accurate locations indoors and fewer invalid location points.
